MARKET COMMENTARY
MARCH 2019

INFOGRAPHIC: THE GLOBAL ECONOMY

Global and European growth forecast: reasons to be cheerful

We've upgraded our forecasts for 2020

Global growth forecast

2019 2.9% to **2.8%** | 2020 2.5% to **2.7%**

Near term indicators remain weak, but there are reasons to be cheerful further ahead:

- ⚡ Lower energy prices are helping to bring down inflation and boost real incomes
- 🤝 US-China are moving closer to a trade deal
- 📉 Monetary policy looks easier - interest rates may rise more slowly

European growth failed to pick up in 2018, but Eurozone fundamentals look strong and signs of a rebound are emerging:

- 📈 4th consecutive year of above trend GDP growth (>1.2%)
- 👍 Above trend employment growth for almost all member states

European growth forecast

2019 1.6% to **1.3%** | 2020 1.2% to **1.4%**

Emerging Markets (EM) forecast update: oil on troubled waters

Inflation outlook improves for most EM countries (ex Russia) due to:

- 📉 Falls in crude oil prices
- 📉 Domestic economic slack

China

Trade war truce with the USA warrants mild optimism but its economy is still set for an ongoing slowdown

Russia

Cheaper oil means weaker currency and more imported inflation. But this had already been priced in and our growth outlook remains the same

Brazil

Economic confidence is high and Bolsonaro's ambitious pension reform proposal has encouraged investors

Japan: Bank of Japan to stay on hold through Value Added Tax (VAT) hike

Growth outlook

2019
1.0% to 0.7%

2020
0.0% to 0.4%

8% to 10% planned rise in VAT in October

Monetary policy is likely to remain unchanged through the VAT hike

The short-term interest rate should be held at -0.1% until late 2020

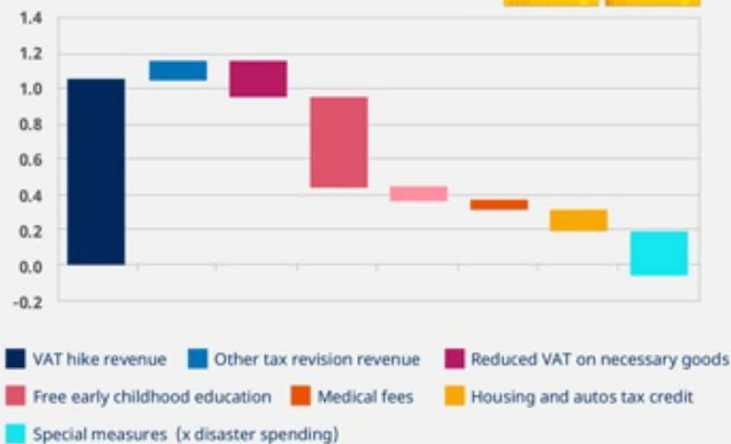

Likely decline in consumer demand, as well as frontloading, as a result

Japanese Government plan to offset the impact of the VAT hike with additional spending

Spending to counteract VAT increase

Cumulative net revenue, GDP %

MULTI-ASSET INVESTMENT VIEWS

KEY

▲ Up from last month ▼ Down from last month

● Positive ● Postive/Neutral ● Neutral ● Neutral/Negative ● Negative

	Category	View	Comments
Main Asset Classes	Equities	●	With limited improvement in earnings revisions, we retain our neutral outlook, with a preference for emerging markets.
	Government Bonds	●	Valuations are expensive but the absence of inflation and soft economic data are supportive of bonds in a portfolio context.
	Commodities	●	Overall we retain a neutral view, despite a weaker outlook for gold and agriculture.
	Credit	●▲	While the continued rally has made valuations less appealing, supportive central bank policies and selective tactical opportunities have led us to upgrade credit.
Equities	US	●	With the Federal Reserve's (Fed) dovish stance, we have become less worried about the risk of recession. However, we would like to see a stabilisation in the earnings outlook before upgrading.
	Europe	●	Earnings revisions have rebounded recently, but given the higher margin assumption embedded in the region's earnings forecasts, we remain cautious.
	UK	●	We believe that the recovery in sterling will remain a headwind for UK equities, specifically large cap stocks.
	Japan	●	Japanese equities continue to underperform global equities despite more attractive valuations and stable economic growth. Lack of confidence continues to be a challenge.
	Pacific ex-Japan	●	The region should benefit if trade tensions ease. However, sluggish growth and a weak housing market in Australia, which represents more than half of the index, is a headwind.
	Emerging Markets	●	There has been a sharp rebound in earnings revisions and attractive forward valuations. In China, easing trade conflicts and additional stimulus should bolster the market.
	Government Bonds	US	●
UK		●	Binary risks associated with Brexit make it difficult to assess over the longer term.
Germany		●▲	We have upgraded our view on Bunds as a relatively steep yield curve, soft economic data and a dovish European Central Bank (ECB) increase their attractiveness.
Japan		●	With no significant changes in policy, we retain a neutral view.
US Inflation Linked		●	Still positive, but we have reduced our performance expectations this month.
Emerging Markets Local		●	Despite a more stable outlook, we expect only expect short dated bonds to perform.

	Category	View	Comments
Investment Grade Corporate Bonds	US	●	Spreads do not yet appear excessive when compared to recent historical highs (2011 and 2016), but we remain concerned about the deterioration of credit quality in the universe.
	Europe	● ▲	With spreads still attractive and an accommodative ECB, we moved to a positive view. We believe European investment grade spreads offer better short-term value, particularly should our core “muddle-through” scenario for the eurozone prove to be correct.
	Emerging Markets USD	●	Following a strong start to the year, and confirmation of accommodative central bank policy, the outlook remains moderately positive, particularly for higher quality EM credits.
High Yield Bonds	US	● ▲	Spreads remain stable for now although expensive on a historical basis. However, strong levels of interest coverage and a benign backdrop support US high yield for the moment.
	Europe	● ▲	With challenging economic conditions and near-term political headwinds, the immediate outlook appears mixed. However, attractive valuations justify an upgrade to neutral.
Commodities	Energy	●	We remain neutral, but recognise the increasing sensitivity of oil prices to OPEC cuts as US production plays an increasingly important role in global supply.
	Gold	● ▼	Downgraded due to increased risk of the US outperforming the rest of the world, which could result in a stronger dollar and reduced growth concerns.
	Industrial Metals	●	Industrial metals have limited upside unless China introduces large-scale fiscal initiatives.
	Agriculture	● ▼	Downgraded to neutral as the excessive build-up in inventories may outweigh any positive rebound from a trade deal. Additionally, the probability of weather disruption has fallen.
Currencies	US \$	● ▲	The dollar looks attractive as a hedge against the risk of a deterioration in global growth, particularly as activity indicators point toward potential US outperformance.
	UK £	●	The outlook remains uncertain as Brexit negotiations intensify. Slowing economic growth remains a key headwind.
	EU €	●	We retain a neutral view on the euro, given the dovish stance of the ECB.
	JAP ¥	● ▼	As a result of slowing growth and weak inflation, we have lost conviction in the Bank of Japan’s willingness to step back from accommodative policy.
	Swiss F	●	The currency has weakened as risk conditions have improved. Our neutral view reflects the balance between weak growth fundamentals and its safe haven status.

Past performance is not a guide to future performance and may not be repeated. The value of investments and the income from them may go down as well as up and investors may not get back the amounts originally invested.

Source: [Schroders, March 2019](#). The views for equities, government bonds and commodities are based on return relative to cash in local currency. The views for corporate bonds and high yield are based on credit spreads (i.e. duration-hedged). The views for currencies are relative to US dollar, apart from US dollar which is relative to a trade-weighted basket.

MARKETS REVIEW

A review of Q1 2019 when equities rebounded, supported by market expectations that the Federal Reserve will not raise interest rates this year.

HIGHLIGHTS

- Equity markets made gains in Q1, rebounding from a weak end to 2018 as concerns over the China-US trade dispute eased and major central banks grew more accommodative. Government and corporate bonds advanced.
- US equities rose, fuelled mainly by an increasingly dovish tilt in Federal Reserve (Fed) commentary, apparent progress in US-China trade talks, and as the government shutdown ended.
- Eurozone equities also recovered well, supported by central banks stepping away from tighter monetary policy. However, worries over economic growth lingered throughout Q1.
- UK equities performed well over the quarter, despite ongoing Brexit-related uncertainty, and were in line with global equities.
- Japanese shares gained but the advance was somewhat muted compared to other developed markets.
- Emerging markets (EM) equities registered a strong return in Q1, led by China. Optimism over a trade agreement with the US and ongoing government support for the Chinese domestic economy were beneficial.
- In bond markets, US 10-year Treasury yields fell in Q1, reaching their lowest level since late 2017. The three-month Treasury bill yield rose higher than that of 10-year bonds in March, in a sign of growing caution among investors over economic growth.

THE US

US equities rebounded from a weak end to 2018 to post significant gains in Q1. January was especially strong, as the Federal Reserve (Fed) confirmed it would adjust planned interest rate hikes to compensate for deteriorating economic momentum and the US government shutdown ended.

Indeed, the Fed settled further into its dovish stance as the quarter progressed, as a number of indicators reflected slower economic growth. Q4 GDP (quarter-on-quarter, annualised) was adjusted downwards to 2.2% from the initial 2.6% reading. Meanwhile, a resolution to persistent US-China trade tensions also appeared more likely.

By the end of March, US equities' progress had dropped to a far more cautious pace as investors balanced the Fed's accommodative tone with the broader implications for economic growth. As the quarter ended, [the Fed lowered its projections for US growth and inflation](#), and reduced its expectations for interest rates hikes. The "dot plot" now shows no rate hikes this year and only one in 2020. The adjusted growth outlook caused the Treasury yield curve to invert - a signal historically associated with a pre-recessionary environment.

Although sentiment cooled by quarter end, equity gains were widespread for the quarter overall. The IT sector – having suffered a difficult Q4 - performed especially well. Healthcare generated more muted gains due to uncertainty over potential regulatory changes. Gains in financials were also hindered by the Fed's comments on rate trajectory.

EUROZONE

Eurozone equities enjoyed strong gains in the first quarter, rebounding from weakness at the end of 2018. Stock markets were supported by central banks stepping away from tighter monetary policy. The US Fed said no further interest rate rises were likely this year while the European Central Bank (ECB) said [rates would remain at current levels](#) at least until the end of the year. Previously it had said rates would stay on hold until the end of this summer. There was also optimism over global trade as the US suspended planned tariffs hikes on Chinese goods.

It was a mixed picture for stock market sectors. Economically-sensitive areas of the market such as industrials and information technology performed well, but the safe haven consumer staples and real estate sectors were also among the top performers. Banks initially drew support from reports of a new ECB programme to support lending; however, the details released in March disappointed some in the market, while ongoing low interest rates may continue to erode net interest margins.

Growth worries continued to linger during the quarter. [The eurozone economy grew by just 0.2%](#) in the final three months of 2018. Germany saw zero growth while Italy slipped into recession. Forward-looking data continued to point to weakness, especially in manufacturing sectors. The flash manufacturing purchasing managers' index⁽¹⁾ dipped to 47.6 in March from February's final reading of 49.3 (a reading below 50 indicates contraction).

UK

UK equities rallied over the period in line with global equities, with almost all areas of the market bouncing back from a very poor

Q4 2018. Against an increasingly uncertain outlook for the global economy, equities perceived to offer superior and defensible earnings growth outperformed. This was reflected in the strong relative performance of the UK's (albeit relatively small) technology sector and select consumer goods companies, including the large-cap tobacco and beverage groups.

In addition to these trends, a number of lowly-valued, domestically-focused areas bounced back strongly following the [delay to Brexit beyond March 2019](#). This development fuelled hopes that a disorderly exit from the EU could be avoided. UK employment growth remained robust. Nominal wages continued to pick up as the UK labour market bucked a wider slowdown in the economy and real wages remained in positive territory as inflation was muted.

The UK economy slowed down during the fourth quarter of 2018 when Brexit uncertainty weighed on business investment. The Office for National Statistics revealed that GDP growth decelerated to 0.2% in Q4 from 0.7% in Q3 2018 and confirmed that economy grew at 1.4% in 2018, the lowest rate for several years. Looking forwards, the OECD predicted UK economic growth would decelerate to 0.8% in 2019 (assuming an orderly Brexit) while the Bank of England cut its 2019 GDP growth projection from 1.7% to 1.2%.

JAPAN

Global equity markets regained some ground in the first quarter after the sharp falls at the end of 2018. However, the Japanese equity market return of 7.7% was somewhat muted compared to other developed markets, and the gradual uptrend was punctuated by some significant individual daily declines. The

Japanese currency weakened against other major currencies, retracing some of the extraordinary moves seen in late 2018 and the early days of 2019.

Several bouts of volatility during the quarter were prompted by a reassessment of interest rate trends after the US yield curve was seen to invert. The perception of a lower global interest rate environment sparked a renewed preference for stable growth, bond-type proxies, within the equity market. Conversely, all financial-related sectors underperformed.

The corporate results season for the quarter ended in mid-February was generally interpreted negatively. However, the balance of real earnings surprises was only slightly skewed to the downside and the individual share price reactions were very muted, suggesting that almost all of the setback had already been discounted in stock prices.

Overall, most of the negative surprises were driven by the sharper-than-expected slowdown in the external environment, especially in China. This particularly affected results in the automotive sector while many tech stocks were also impacted by the slowdown in smartphone sales. However, among individual sectors there is some evidence of increased pressure coming from higher labour costs, especially in distribution, food and retail. Corporate earnings revisions for the fiscal year just ended have remained on a negative trend throughout March.

Japanese economic data released in March was generally in line with expectations. Headline inflation was actually slightly ahead of forecasts with a broadening range of categories seeing some increase in prices. The Bank of Japan's quarterly Tankan survey

was also released just after the end of the quarter. Although conditions for large manufacturers have deteriorated, this was largely to be expected given the global backdrop at the time the survey was taken.

ASIA (EX JAPAN)

Asia ex Japan equities rebounded strongly from the sell-off in the previous quarter. The MSCI Asia ex Japan index posted double-digit gains though it slightly underperformed the MSCI World index. All markets in the region closed higher, helped in part by progress in US-China trade negotiations. The dovish shift by major central banks also boosted sentiment.

Global growth concerns remained a drag, however. In particular, China's economy grew at its weakest pace since 1990. January-February data pointed to a continued slowdown. The Chinese government lowered its full-year growth target to 6-6.5% and outlined higher public spending and tax cuts, while the central bank cut the reserve requirement ratios for banks.

Against this backdrop, markets in China and Hong Kong fared best. Aside from easing trade tensions, Chinese stocks were further buoyed by index provider MSCI's move to increase the weighting of China-listed shares in its benchmark indices. Gains were also fuelled by anticipation that Chinese authorities would continue to introduce supportive policies to counter the economic slowdown.

Elsewhere, Taiwanese stocks also advanced. Indian markets were pressured by geopolitical tensions with Pakistan, but they staged a late rally on optimism that the current coalition government would return to power in upcoming elections. South

Korean stocks underperformed amid the abrupt end to the US-North Korea summit and concerns over corporate earnings.

ASEAN (Association of Southeast Asian Nations) markets also trailed the broader region. Malaysia and Indonesia were the biggest laggards. The Philippines and Thailand fared better though the latter was held back by uncertainty surrounding the election outcome; official results are not expected until May.

EMERGING MARKETS

Emerging markets equities posted a strong return in Q1, led by China. The MSCI Emerging Markets Index increased in value but underperformed the MSCI World.

In China, the Fed's dovish comments and the US's decision to suspend tariff hikes on \$200 billion of Chinese goods, together with ongoing government support for the Chinese domestic economy, were all supportive. China A-shares were particularly strong as MSCI announced plans to quadruple their weight in the index between May and November. Elsewhere, a rally in the price of crude oil was beneficial for net exporter countries such as Russia and Colombia.

Conversely, Qatar was the weakest index market, as equities fell back after a strong rally last year. This was primarily driven by strong passive flows, which started to abate in Q1. Turkish equities declined and the lira lost value as the government's unorthodox policy response to the country's economic problems continued.

GLOBAL BONDS

A strong rebound following sharp declines at the end of last year,

a dovish shift from central banks and mounting growth concerns combined to allow both riskier assets and government bonds to perform well in Q1. Stocks and high yield corporate bonds each enjoyed their strongest quarter for several years.

The dovish pivot from major central banks proved particularly significant with markets having grown nervous over the prospect of monetary tightening in the US. The heads of both the Fed and the ECB indicated rates would not rise in 2019. Growth and inflation forecasts were also lowered.

US 10-year Treasury yields fell 30 basis points (bps) over the quarter reaching their lowest level since late-2017. The three-month Treasury bill yield rose higher than that on 10-year bonds in March. This yield curve inversion underlines the growing caution among investors around economic growth prospects.

In European bond markets, 10-year Bund (German government bond) yields were also more than 30bps lower and fell below zero toward the end of March for the first time since October 2016. European economic data weakened further through the quarter, particularly for the manufacturing sector.

Corporate bonds had a strong quarter, retracing the weakness experienced in Q4 2018. High yield^[2] credit outperformed investment grade, with both outperforming government bond markets.

Emerging market (EM) bonds had a positive quarter with US dollar-denominated debt outperforming local currency bonds as certain EM currencies weakened.

With the first quarter showing strong gains for global stock markets, convertible bonds benefitted from a significant tailwind. Convertible bonds as measured by the Thomson Reuters Global Focus index were up 6.6%. Unusually in a period of rising markets and greater appetite for risk, convertibles were not sought after by investors and their valuations cheapened slightly.

COMMODITIES

The S&P GSCI Spot Index posted a robust return in Q1. Energy led the way as crude oil prices rebounded from a sell-off in Q4. Production cuts from OPEC and other oil producers, together with the implementation of US sanctions on Venezuela, served to tighten supply. The industrial metals component also moved higher amid positive signs emanating from US-China trade talks. By contrast, precious metals recorded a modest gain, supported by a small rise in gold prices.

^[1] The purchasing managers' index is produced by IHS Markit and based on survey data from companies in the manufacturing and service sectors. A reading above 50 indicates expansion.

^[2] Investment grade bonds are the highest quality bonds as determined by a credit ratings agency. High yield bonds are more speculative, with a credit rating below investment grade.
